TRENTON, NJ

JAMES E. MCGREEVEY
Governor

November 9, 2004

TO: All Using Agencies & Term Contract T-1845 Vendors.

FROM: Wilma Wilt, Contract Procurement & Control Specialist

SUBJECT: Fuel Oil #1, 2D and Winter Mix
Term Contract T-1845 (00-X-30691)
Period: January 1, 2000 to December 31, 2005

ADDENDUM # 44

DEP has adopted amendments to the New Jersey Pollutant Discharge Elimination System (NJPDES), N.J.A.C. 7:14A-24, requiring Using Agencies that meet specific criteria, to apply for NJPDES permits. The new amendment also requires Using Agencies to meet specific standards, measurable goals, and implementation schedules. Attachment D of the Highway Agency Stormwater General Permit, copy attached, outlines the required practices for fueling operations, vehicle maintenance and good housekeeping SBRs (Statewide Basic Requirements) that an Using Agency must follow.

Based on the new changes, it is recommended that the following amendment be included as part of all existing fuel/gasoline contracts, effective April 1, 2005 for Using Agencies that were issued new stormwater permits on or after April 1, 2004.

Additional Contractor Responsibilities Clause:

Dispensing of Fuels and Spill Prevention Requirements:

- There shall be no topping off vehicles, mobile fuel tanks, and storage tanks. Drip pans must be used under all hose and pike connections and other leak-prone areas during bulk transfer of fuels.
- During bulk transfer storm sewer inlets must be blocked, or tanks must be contained with temporary berms or temporary absorbent booms during the transfer process. If temporary berms are being used instead of blocking the storm sewer inlets, all hose connection points associated with the transfer of fuel must be within the temporary berms during the loading/unloading of bulk fuels.
- Any equipment, tanks, pumps, piping and fuel dispensing equipment found to be leaking or in disrepair must immediately be repaired or replaced.

Delivery Scheduling:

Using Agencies that have a NJPDES permit on file must have a trained employee present to supervise during bulk transfer. The contractor must contact the key location representative one hour prior to each fuel/gasoline delivery or the delivery may not be permitted. If an emergency situation exists, the key location representative may instruct the contractor to deliver the fuel/gasoline without an agency employee present. Times and dates for regular and emergency deliveries will be scheduled in accordance with the original terms of the contract. Any specific agency instructions with contact person/phone number, specific delivery days and times, etc. will be attached to the Notice of Award addendum. Any additional specific agency instructions will be advised separately in a future Notice of Award addendum.

Attachment D
REQUIRED PRACTICES FOR FUELING OPERATIONS, VEHICLE
MAINTENANCE, AND GOOD HOUSEKEEPING SBRs

A. The following BMPs must be implemented at maintenance yards, including maintenance activities at Service Areas and ancillary operations (for example, impound yards, solid waste transfer stations, mobile fueling), where applicable, that are operated by the Highway Agency:

1. Inventory Requirements for Maintenance Yard Operations (including Service Areas, and Ancillary Operations)

a. Highway Agencies shall include for maintenance yard operations an inventory that includes the following:

- i. A list to be made part of the SPPP of general categories of all materials or machinery located at the maintenance yard, which could be a source of pollutants in a stormwater discharge. The materials in question include, but are not limited to: raw materials; intermediate products; final products; waste materials; by-products; machinery and fuels; and lubricants, solvents, and detergents that are related to the maintenance yard operations or ancillary operations. Materials or machinery that are not exposed to stormwater or that are not located at the maintenance yard or related to its operations do not need to be included.

2. Fueling

- a. No topping off vehicles, mobile fuel tanks, and storage tanks. Drip pans must be used under all hose and pipe connections and other leak-prone areas during bulk transfer of fuels.
- b. During bulk transfer block storm sewer inlets, or contain tank with temporary berms or temporary absorbent booms during the transfer process. If temporary berms are being used instead of blocking the storm sewer inlets, all hose connection points associated with the transfer of fuel must be within the temporary berms during the loading/unloading of bulk fuels. A trained employee must always be present to supervise during bulk fuel transfer.
- c. Clearly post, in a prominent area of the facility, instructions for safe operation of fueling equipment, and appropriate contact information for the person(s) responsible for spill response.
- d. Any equipment, tanks, pumps, piping and fuel dispensing equipment found to be leaking or in disrepair must immediately be repaired or replaced.

3. Vehicle Maintenance

- a. Perform all vehicle and equipment maintenance at an indoor location with a paved floor whenever possible. For projects that must be performed outdoors that last more than one day, portable tents or covers must be placed over the equipment being serviced when not being worked on, and drip pans must be used.
